```

#### Xcode - Runtime Issues

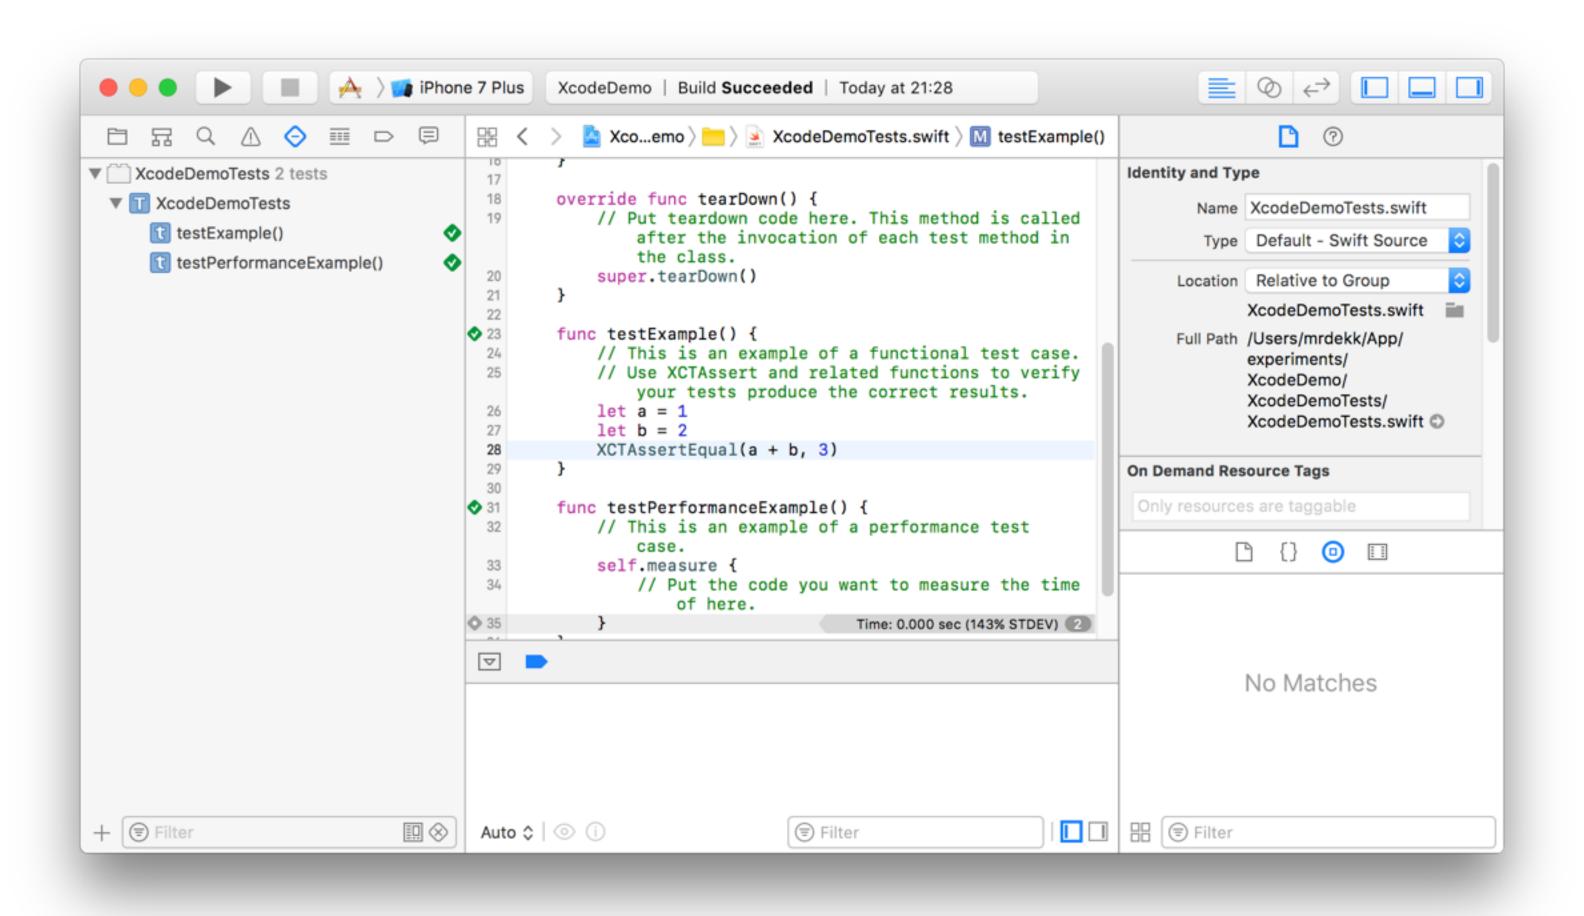

## Xcode - View Debugger

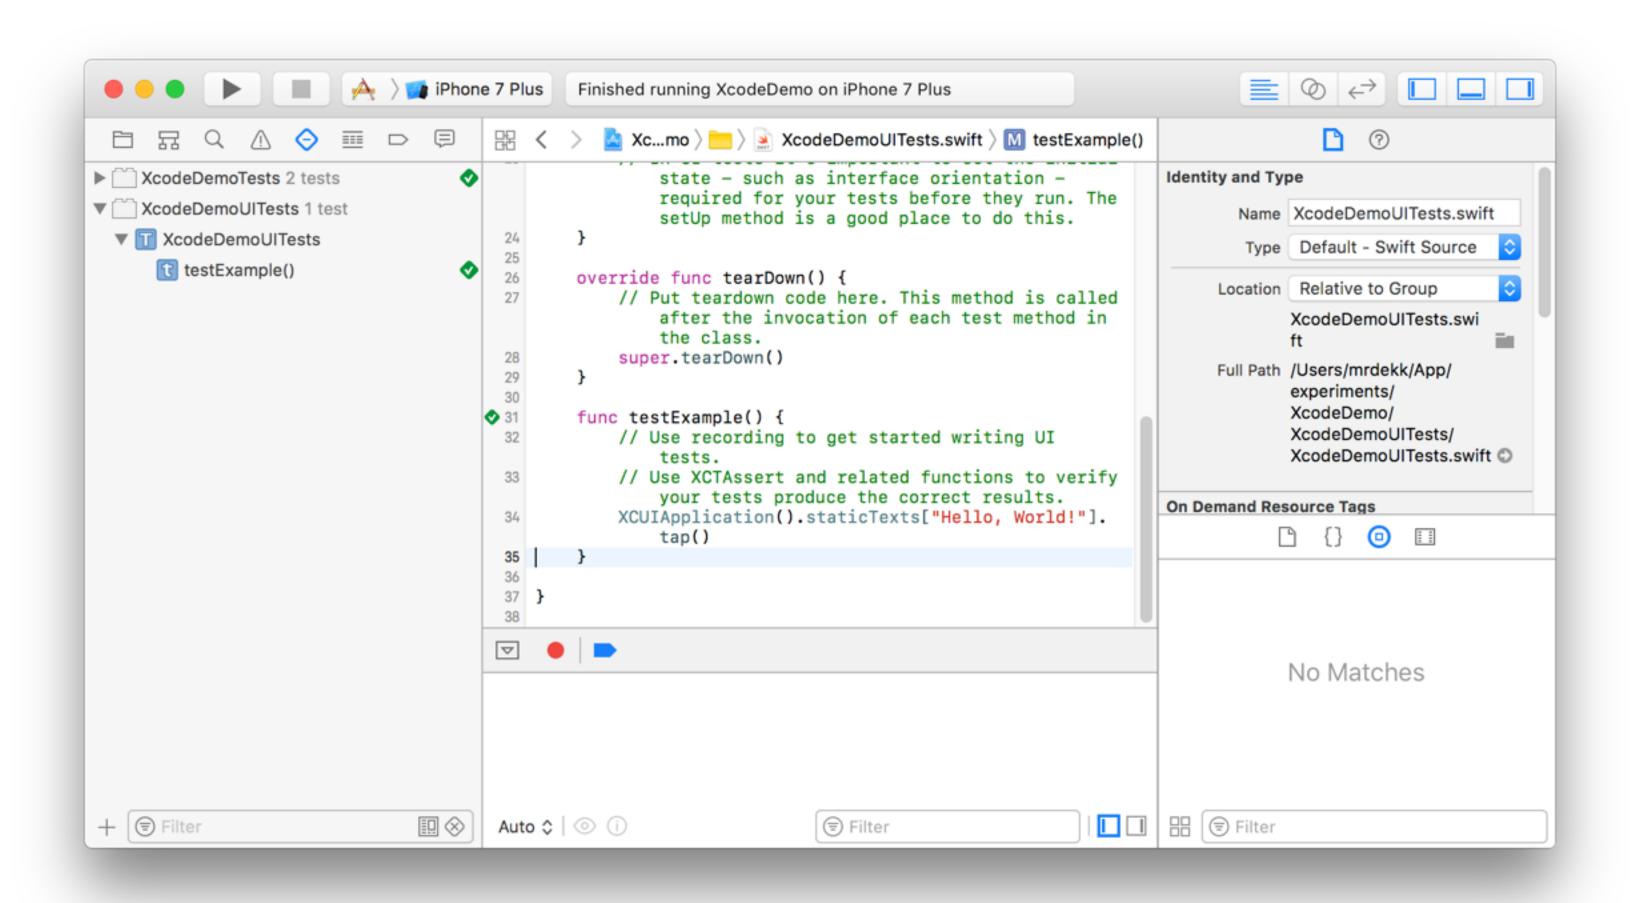

## Xcode - Memory Profiler

## Xcode - Unit Testing

## Xcode - Ul Testing

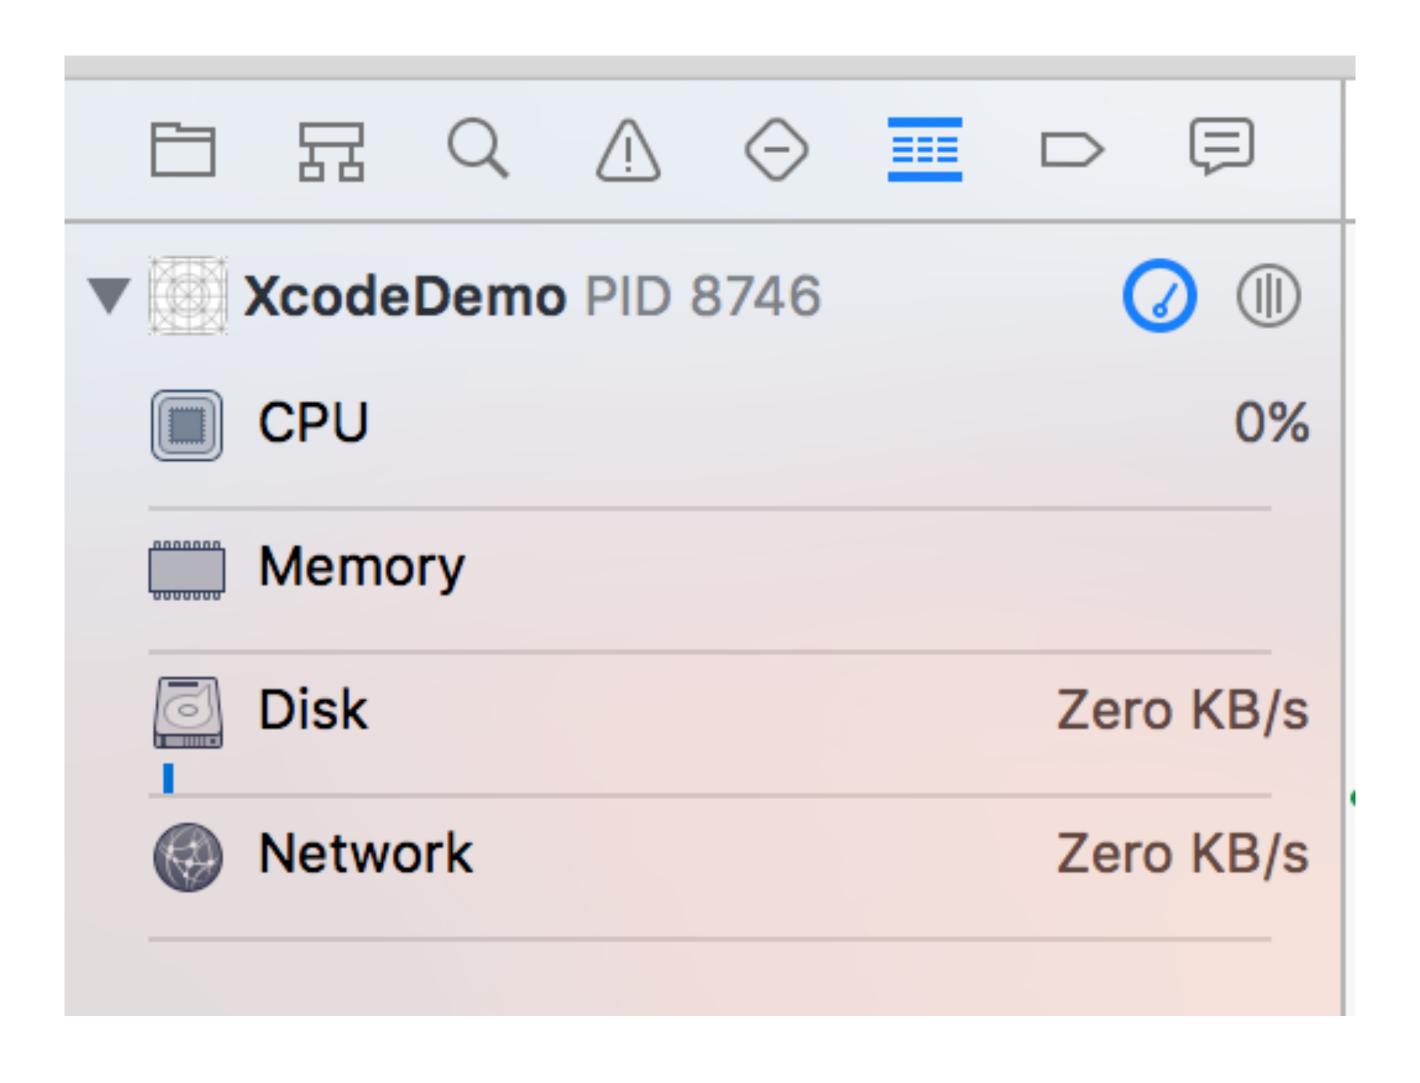

## It's a DEMO time

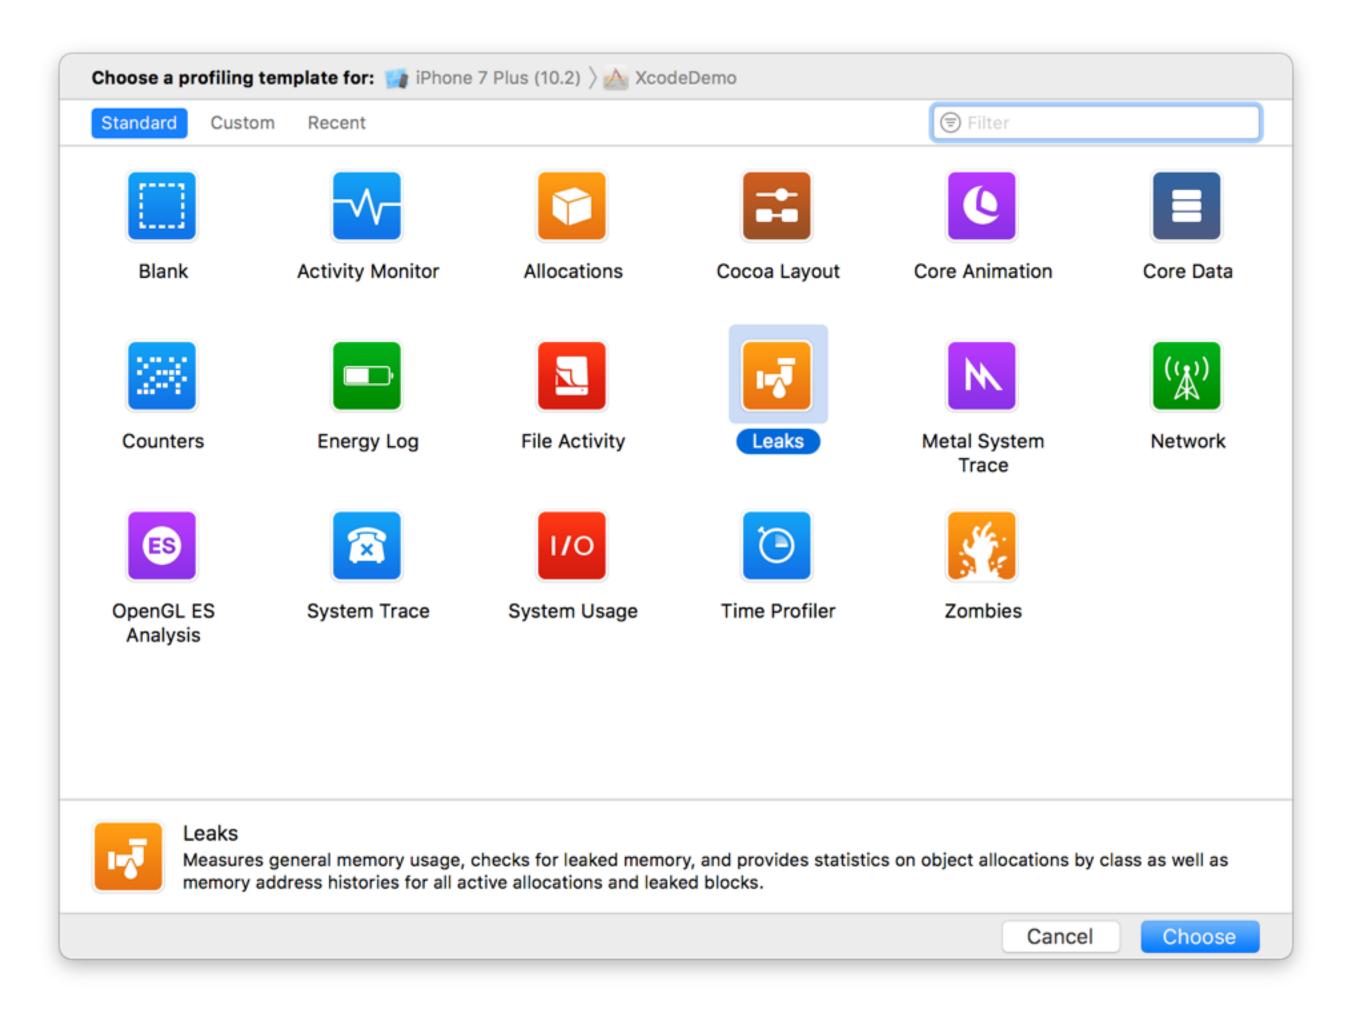

Базовые инструменты Xcode

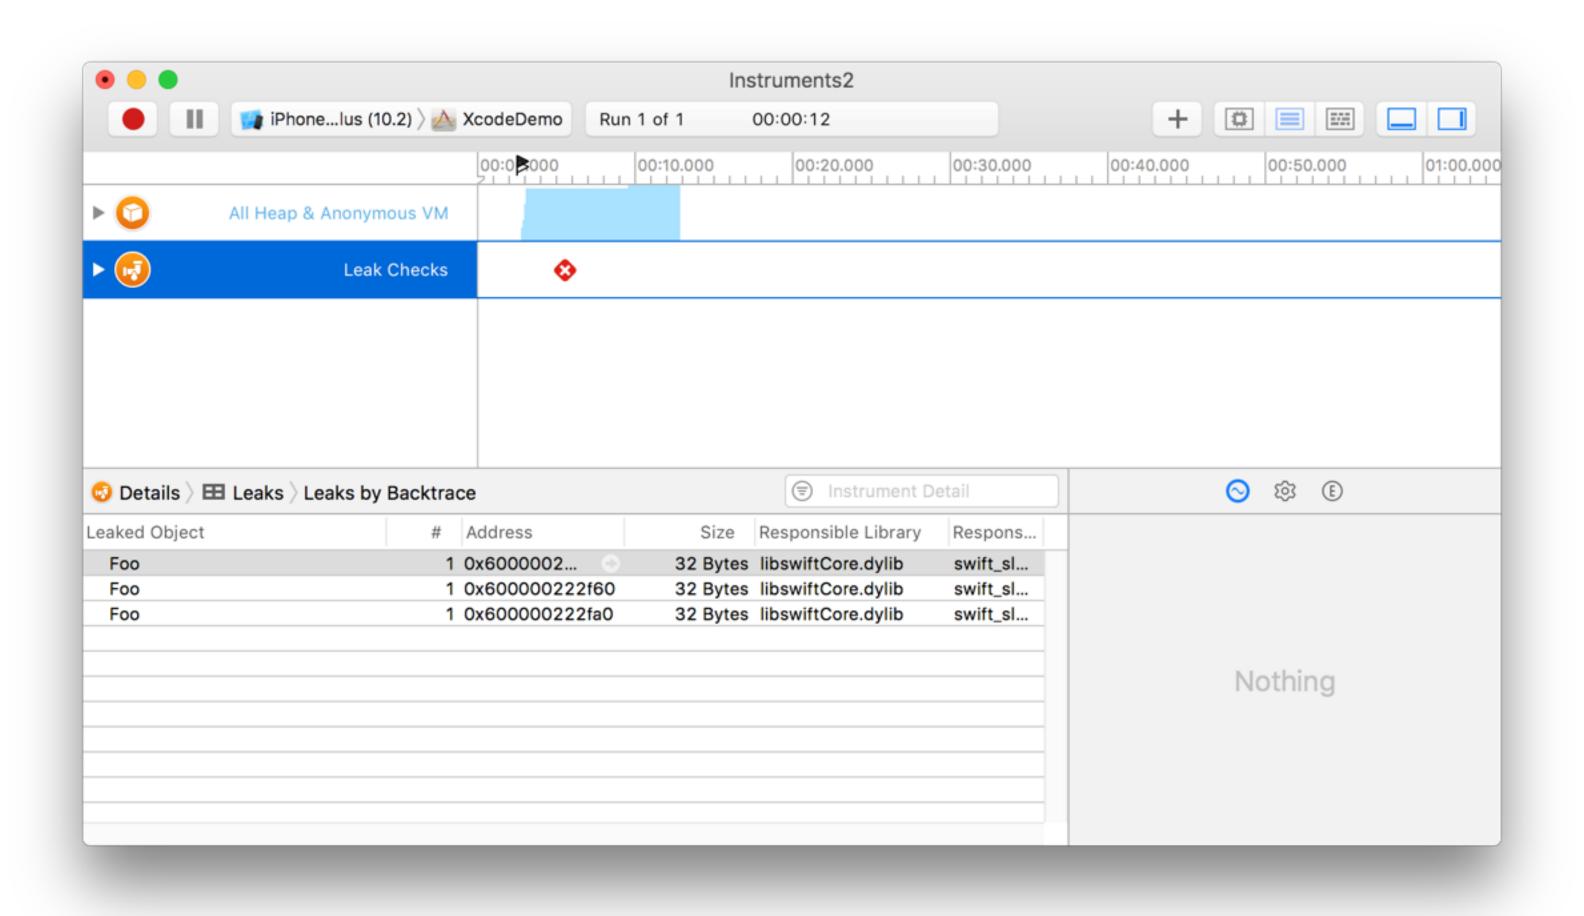

## Xcode - Basic Profiling

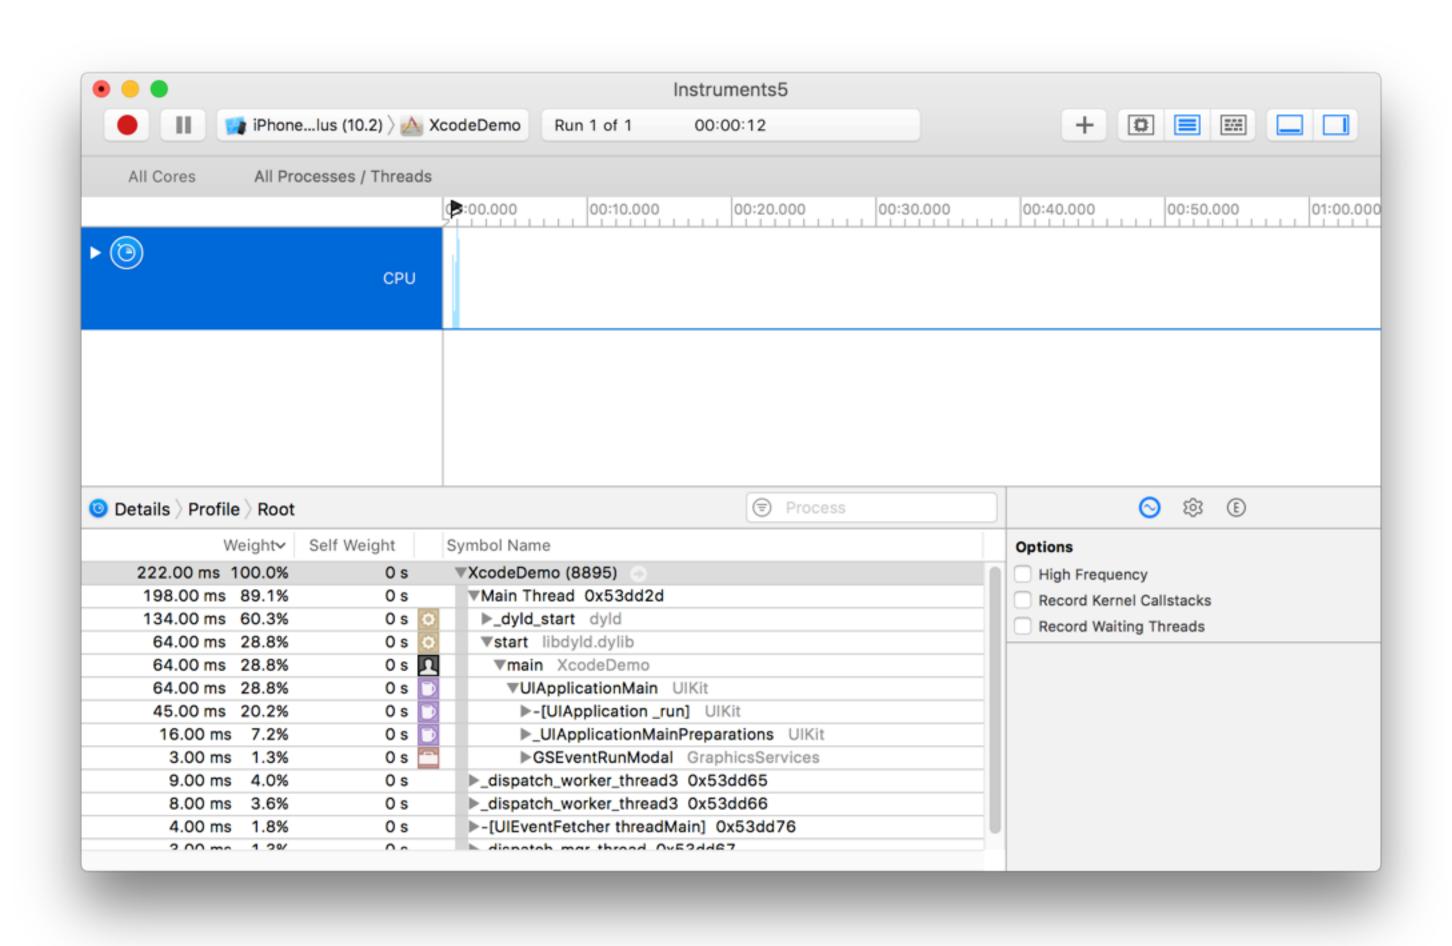

#### Instruments

## Instruments - Memory Leaks

#### Instruments - Time Profiler

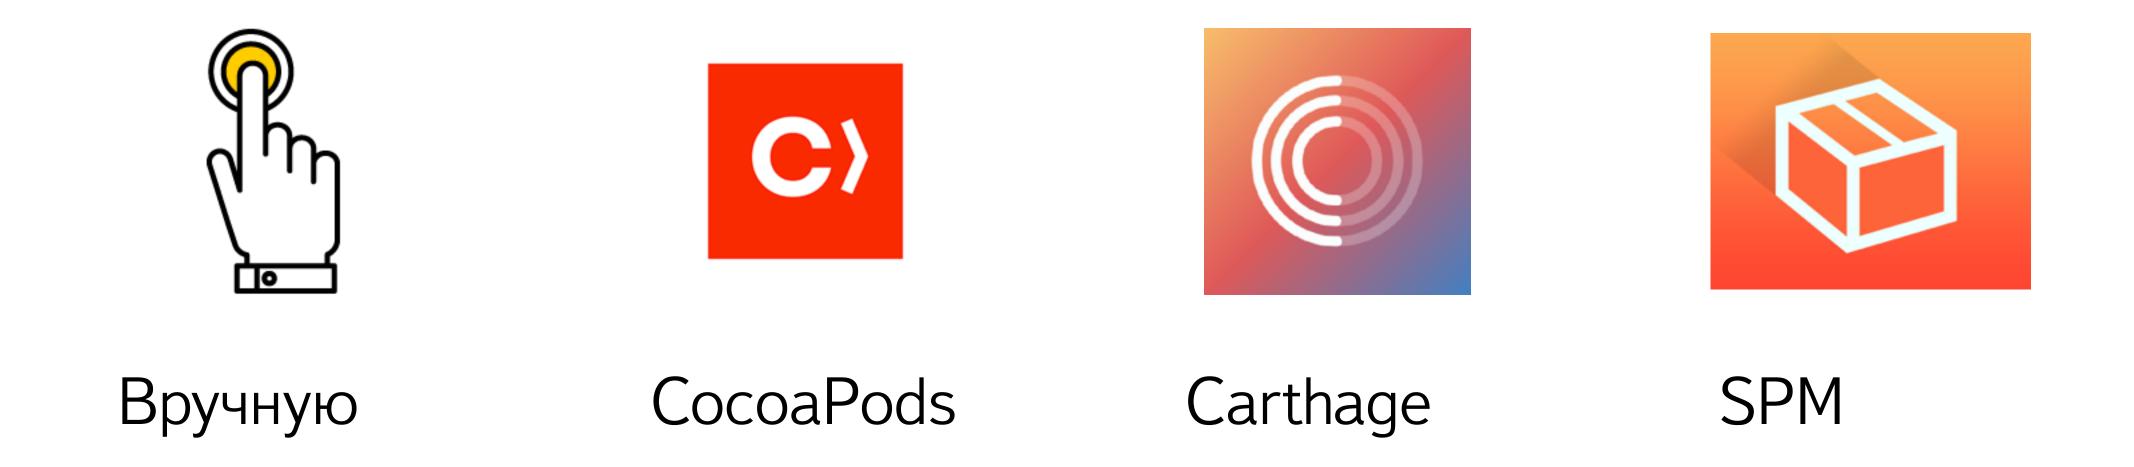

# It's a DEMO time

Instruments

## Управление зависимостями

#### CocoaPods

- Podfile
- Podfile.lock
- > pod ...
- Pods Project

## CocoaPods - use\_frameworks!

```
use_frameworks!
```

\ use frameworks!

# It's a DEMO time

CocoaPods

# Вопросы?

# Задача

## Общие требования

- Cоздать и настроить проект Notes
- > Подключить к нему CocoaPods и настроить зависимость
- Восстановить работоспособность кода из первой лекции, добавить логирование действий
- \* Провести анализ своего кода на производительность и утечки памяти
- \*\* Симулировать проблемы утечек и производительности, продиагностировать и показать решение

#### Настроить проект

- Необходимо создать проект Notes (+workspace через CocoaPods)
- Необходимо настроить сборку Notes, добавить иконки и стартовый экран
- Необходимо настроить дополнительную конфигурацию сборки TestFlight (к Debug и Release)
- В схеме настроить логирование выделения памяти и зомби

#### CocoaPods

- > Подключить CocoaPods
- Hастроить Podfile
- > Добавить зависимость CocoaLumberjack (для Swift)
- > Попробовать логировать свои действия

#### Как сдавать

- Проект на git\*
- Демонстрация работы с Instruments набор скриншотов

#### Где можно экспериментировать?

```
@UIApplicationMain
class AppDelegate: UIResponder, UIApplicationDelegate {
    var window: UIWindow?

    func application(_ application: UIApplication,
didFinishLaunchingWithOptions launchOptions:
[UIApplicationLaunchOptionsKey: Any]?) -> Bool {
        // Override point for customization after application launch.
    }
}
```
